### How to submit a manuscript ●●●

**Step 1. Manuscript Type, Title and Abstract**  
Select manuscript type and fields, and enter your title, running title and abstract into the appropriate boxes. You can cut and paste from your document. If you need to insert a special character, click the "Special Characters" button.

**Step 2. Authors and Institutions**  
Enter your co-authors' information in the boxes under "Add a New Author," then "Add to My Authors."

**Step 3. File Upload**  
The manuscript file should not include author's name or name of organization where the authors work. Upload and select the correct file designation for each. Acceptable file formats are pdf, doc, ppt and jpg, and each files should not be any bigger than 10MB in size.

**Step 4. PDF Conversion**  
Click the Make PDF button, and your files will be merged info one pdf file.

**Incomplete Manuscripts** 2

Title	Aaaa																				
Running Title	Bbb																				
Author	YounSang Cho <sup>1</sup> , Eun-jung Rhee <sup>1*</sup> M2Community, OnLine <sup>1</sup>																				
Abstract	Background: Acute postprandial hyperglycemia is an important affector for atherosclerosis in subjects with glucose intolerance. We analyzed the relationship of brachial-ankle (ba) pulse wave velocity (PWV) with fasting and post-challenge plasma glucose levels according to different time points during oral glucose tolerance test (OGTT). Methods: In 663 subjects with fasting hyperglycemia, 759 OGTT were performed to confirm the glucose tolerant status, and fasting, post-challenge 30-minute and 120-minute glucose levels were measured. Anthropometric measurements were done, and fasting lipid profiles were measured. baPWV were measured in all subjects and the relationship between fasting, 30- and 120-minute post-challenge glucose levels and baPWV were analyzed. Results: Among the participants, 62.9% were prediabetes and 21.7% were diabetes. Mean baPWV value was significantly higher in subjects with diabetes compared with prediabetic group and mean high-density lipoprotein cholesterol level was significantly lower in subjects with diabetes compared with normoglycemic group. In bivariate correlation analysis, age, blood pressure, total cholesterol, low-density lipoprotein cholesterol, 30-minute and 120-minute post-challenge glucose levels showed significant positive correlation with baPWV value. In multiple regression analysis, 30-minute post-challenge glucose level was a weak but significant determinant for mean baPWV value even after adjustment for other confounding variables. Conclusions: Postprandial hyperglycemia, especially in 30-minute glucose showed mostly significant correlation with baPWV in subjects with fasting hyperglycemia. These results imply the deleterious effect of acute hyperglycemic excursion on arterial stiffness in subjects with glucose intolerance.
